

# Cougar Habitat Analysis

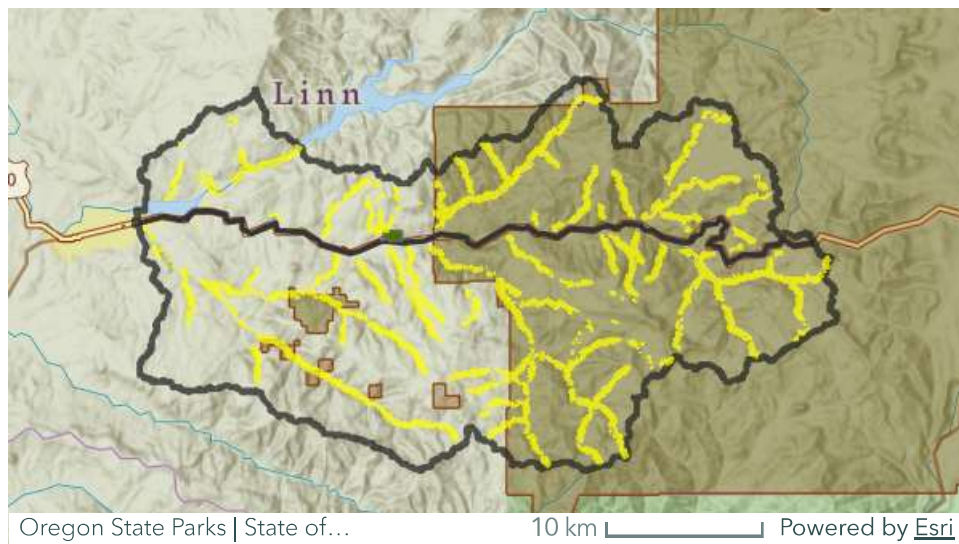

A comparison of potential cougar habitat  
using criteria defined by OPRD and ODFW

Potential Cougar Habitats - ODFW

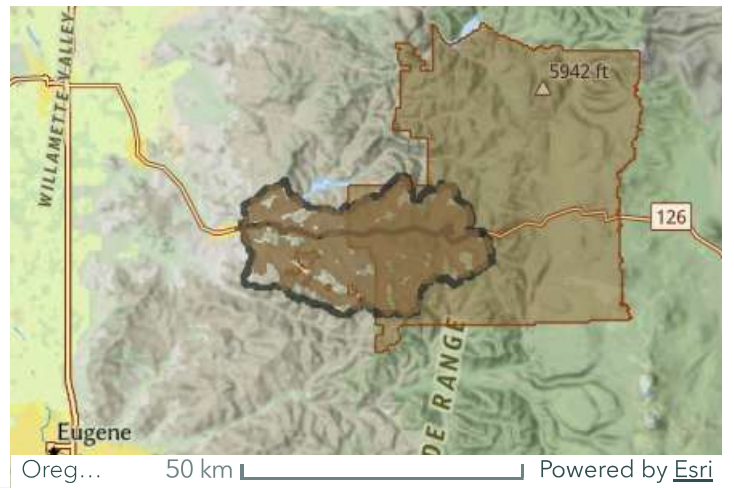

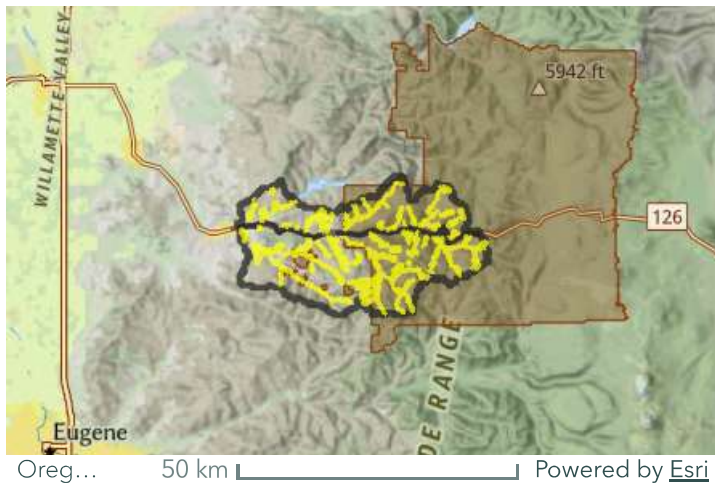

Potential Cougar Habitat - OPRD (Narrower Criteria)

These maps show areas in and around Willamette National Forest where potential cougar habitat overlaps with locations where human–wildlife interaction is likely. Decision-makers will use these maps to identify priority locations for field research to confirm the presence of cougars in the area, supporting efforts to assess the impact of a growing cougar population on visitors and residents.

Cougars are a vital component of the ecosystem, and conducting this research is essential to advancing conservation efforts and strengthening wildlife management strategies in the region, while ensuring visitor safety.
